HOW TO ALWAYS STAY CONNECTED TO THE IRC GC NO MATTER WHAT (Tutorial)

[\[edit\]](#) [\[delete\]](#) [\[pin to blog\]](#)

hi guys!!!!!! if ur reading this theres a good chance ur either @spadezstarr or @amajustafanintheworld (hi pookies) and if ur not who are you and why are you in my house

i recognize there is an issue with the existing IRC groupchat where if you get disconnected, either you leave or maybe you accidentally close out the browser or something, if you choose to come back to the GC at that point, you will not be able to see previous messages that were sent while you were gone. **this is very annoying.**

fortunately, i discovered a really easy fix to this problem last night!!!!!! [CryptIRC](#) is basically an IRC client (if you dont know what that means, basically it's just a tool that connects you to an IRC chat such as our own) that always keeps you connected to the group chat, so even if you leave you wont miss a single message!!!!!!!!!!!! and you dont gotta download anything either!!!!!!!!!!!! thats so badass right????

its a bit of a complex process, which is why i made this tutorial for you guys, if you follow the instructions below it shouldnt be too hard!

.....

TUTORIAL

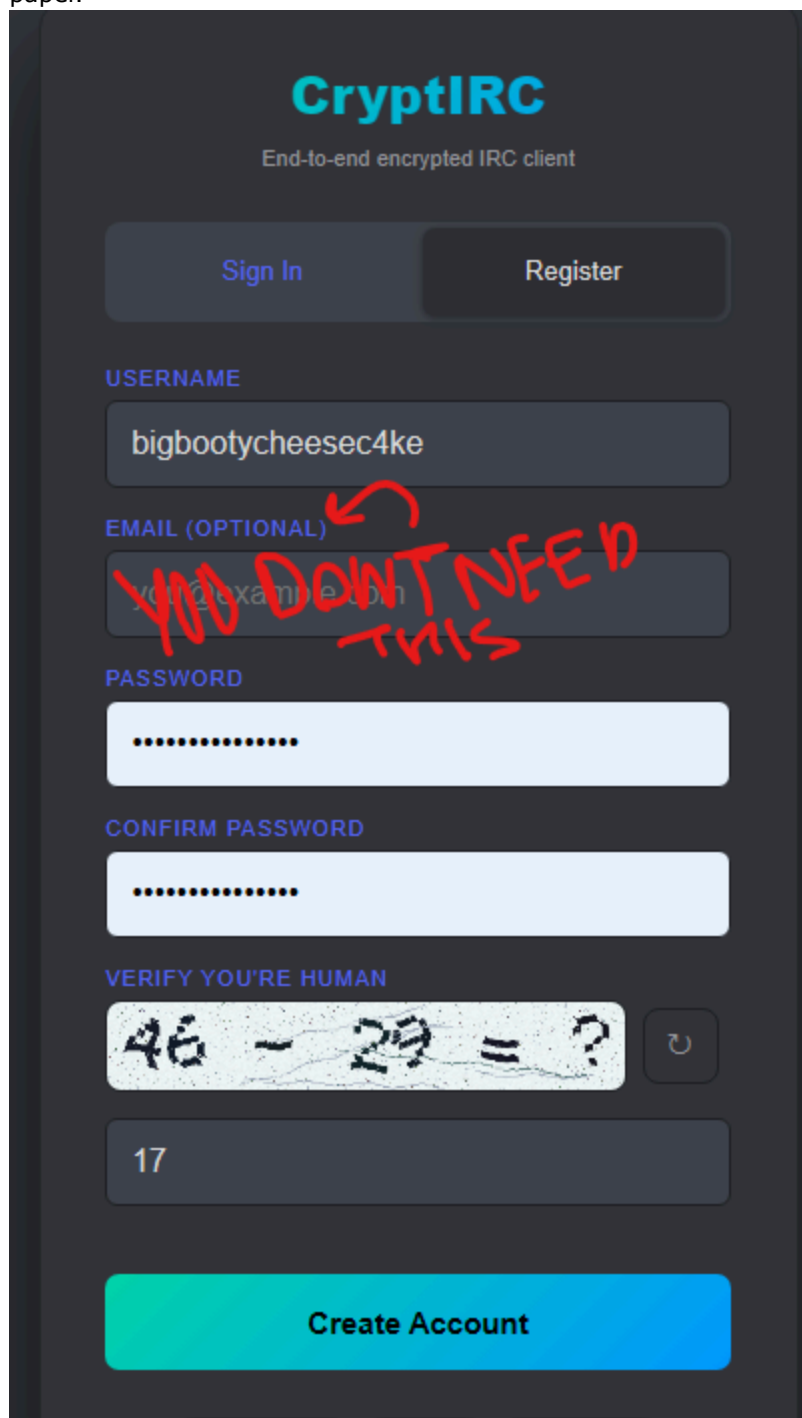

what you'll need first:

- a piece of paper (to write down stuff)
- a pen
- literally any computer/phone/tablet/anything that can connect to the IRC

1. **Go to <https://client.twistednet.org/cryptirc> (the irc client itself) and create an account.**

YOU DO *NOT* NEED TO PUT IN YOUR EMAIL ADDRESS. There's a box to put in your email, but it's optional so an email address is really unnecessary here. besides i dont want to force you guys to sign up for random shit on ur personal emails 'cuz i know that would prob be annoying. just put in your username and make up a password and save it to your password manager or write it down on your piece of

paper.

The image shows the registration interface for CryptIRC, an end-to-end encrypted IRC client. The form is dark-themed with teal accents. It includes fields for Username, Email (Optional), Password, and Confirm Password. A red handwritten note 'YOU DONT NEED THIS' with an arrow points to the Email field. Below the password fields is a 'VERIFY YOU'RE HUMAN' section featuring a math captcha: $46 - 29 = ?$. The answer '17' is entered in the provided box. A large teal 'Create Account' button is at the bottom.

CryptIRC
End-to-end encrypted IRC client

Sign In Register

USERNAME
bigbootycheesec4ke

EMAIL (OPTIONAL)
you@example.com

PASSWORD
.....

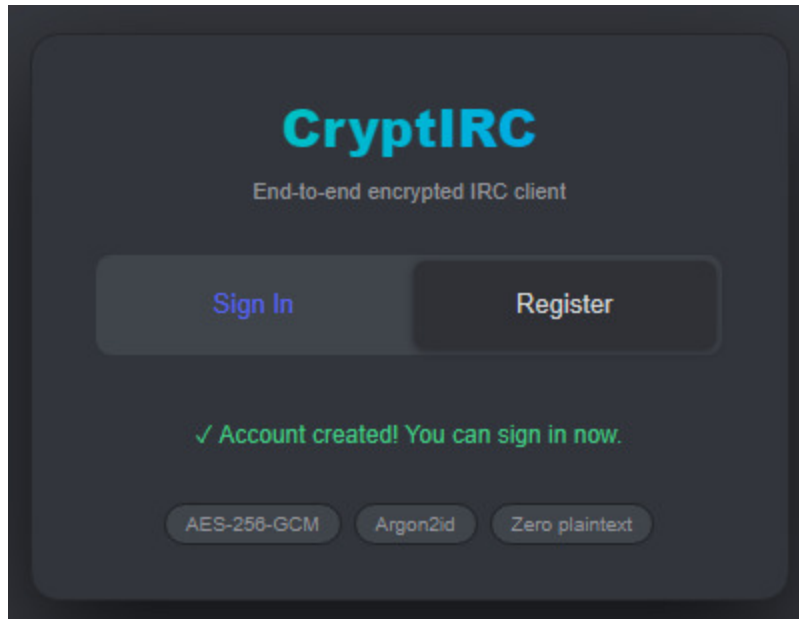

CONFIRM PASSWORD
.....

VERIFY YOU'RE HUMAN
 $46 - 29 = ?$

17

Create Account

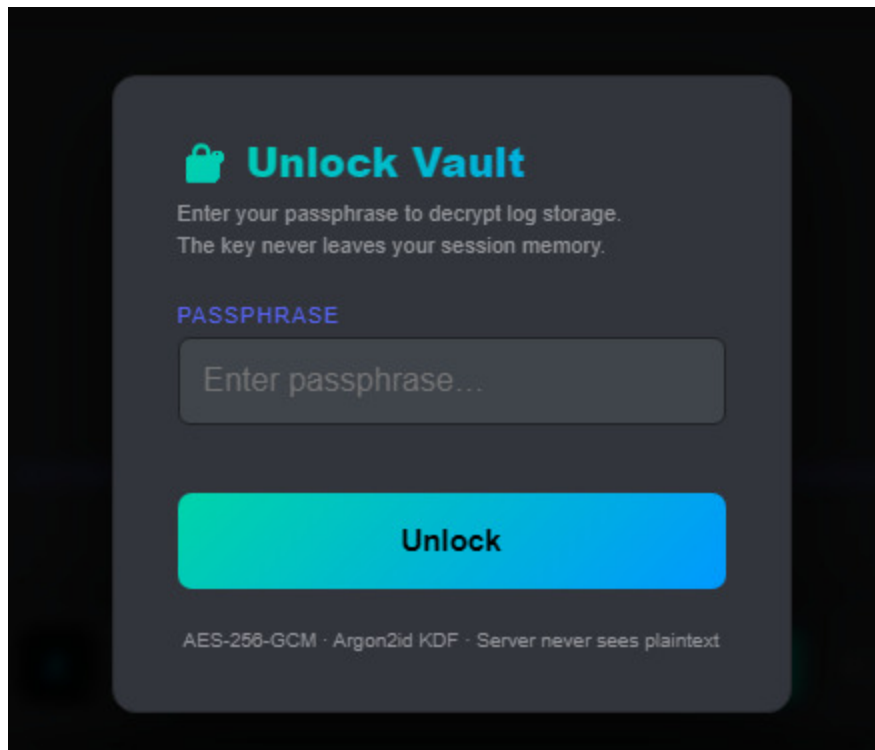

theres a math problem captcha(?) to verify youre human at the bottom, just answer that math problem and then click "create account"

when this screen pops up, go to the "sign-in" slider and login to ur account

2. make a vault key/passphrase (DO NOT FORGET THIS!!!!!!)

so you made your account!!!!!! AWESOME!!!!!!!!!!!!!! ok so when you log in the first thing you're gonna see is this screen:

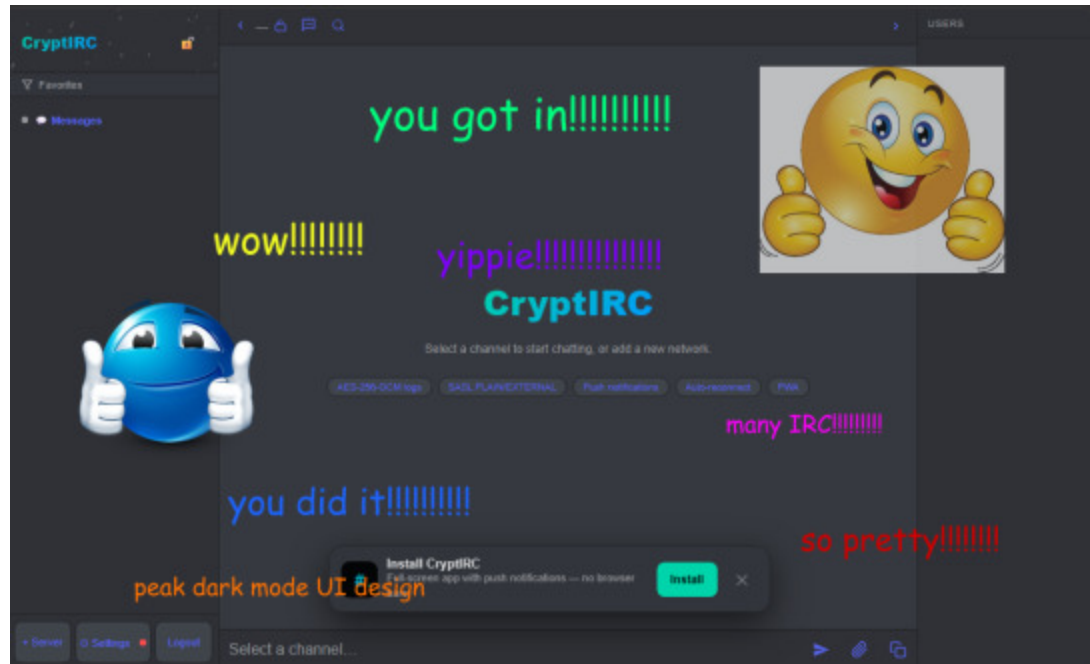

"now what the balls is this" you must be thinking to yourself.

well simply put cryptIRC has a "vault lock" feature and basically all it does is disconnect and hide all the chatrooms ur connected to like a "lock" and hides it until you put ur passphrase back in. you probably wont even use this feature, but just in case, **its a good idea to create a passphrase anyway, and write it down on ur paper or in your password manager or somewhere you wont forget it** because if you lock your vault on accident or something you wont be able to get back into the

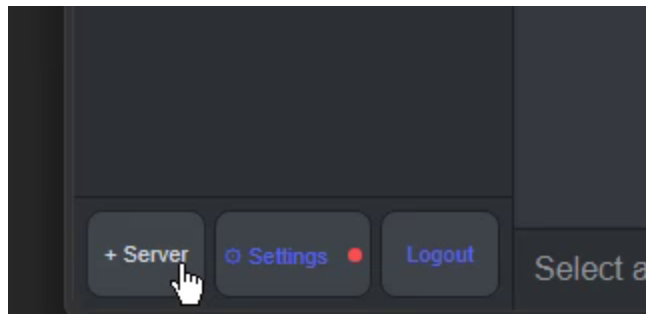

GC if you forgot the passphrase. so yeah. your passphrase can be anything, like "burger king" or something (yes it supports spaces) but just make sure you dont forget it

3. add the group chat to cryptirc

okay!!!!!!!!!! so you finally got into the actual cryptIRC client itself!!!!!!!!!!!!!!
AWESOME!!!!!!!!!!!!!! we're on a roll here

by default you arent connected to any IRC chatrooms/servers. we're gonna fix this in the nextstep, when we add the #wayneandgarthscanadianweddingceremony group chat to CryptIRC. this next part is admittedly a little complex, but i assure you everything will be alright and easy if you just follow my lead

first click the "Add Server" (labeled as "+ Server") button in the bottom left corner of the site

a big "Add Network" box will pop up on your screen. fill in the fields as shown:

Edit Network

PRESET (OPTIONAL)
— Choose a network —

LABEL
#wayneandgarthscanadianweddingceremony (IRC4Fun) ← the label actually doesn't matter. you can name it whatever! it won't break anything if you name it something else but i just recommend naming it this

CONNECTION TYPE
Direct IRC server

SERVER irc.irc4fun.net **PORT** 6697

TLS Yes **NICK** bigbootycheesec4ke ← for some reason CryptIRC has 3 different fields for a name, just put ur user name in all 3 boxes

USERNAME bigbootycheesec4ke **REALNAME** bigbootycheesec4ke

SERVER PASS (OPTIONAL)

AUTO-JOIN (SPACE-SEPARATED)
#twisted #dev

QUIT MESSAGE (OPTIONAL)
Leave blank to advertise CryptIRC ← optional, but crypt has a feature to display a quit message everytime you leave the server. it can be anything like "bye guys!!!!!!!" to "stop fucking the waitresses over at buffalo wild wings while they're trying to serve the customers" /ref

SASL AUTHENTICATION
METHOD None

AUTO-RECONNECT Yes (exponential backoff) **ACCEPT INVALID TLS** No

(i think i should explicitly state you do NOT need to name yourself bigbootycheesec4ke. use ur own username. lol.)

PERFORM / ON-CONNECT COMMANDS

One per line. Runs after NickServ, before auto-join. Raw IRC or /msg, /notice, /mode, etc.

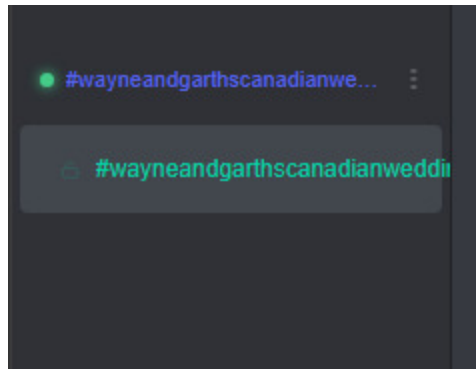

/join #wayneandgarthscanad

then scroll down until you see "PERFORM / ON-CONNECT COMMANDS" and then copy/paste this command into the box:

/join #wayneandgarthscanadianweddingceremony waynesklazomaniadiagnosis

make sure you put that all on one line or else the command will fail.

HOW TO ALWAYS STAY CONNECTED TO THE IRC GC NO MATTER WHAT (Tutorial) - BLURXY!'s Blog | SpaceHey
after you've done all that, click "Join & Connect" button at the bottom and it should connect you.

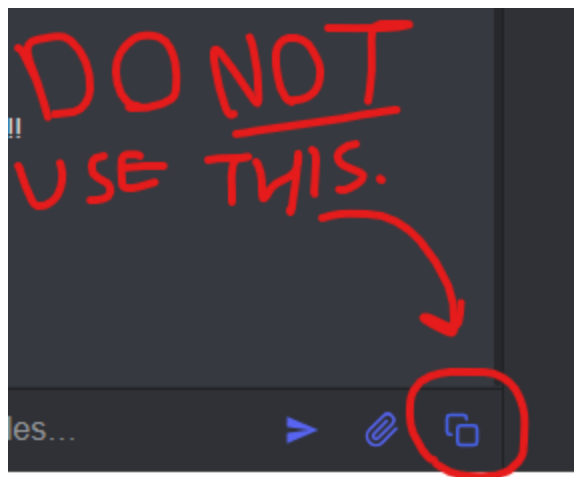

if everything worked, you should see a new tab on the left side of your screen.

now, click the tab that falls under "#wayneandgarthscanadianweddingceremony (IRC4Fun)" (as shown in this video) to get into the channel. congratulations!!!!!!!!!!!!!! you are now in the group chat and no matter what happens you wont miss a chat message!!!!!!!!!!!! hell yeah!!!!!!!!!! :DDD

i have one warning for if you're using this though:

WHATEVER YOU DO, DO NOT, DO NOT USE THE PASTE SNIPPET BUTTON IN THE CRYPTIRC CLIENT. DO NOT DO IT. DONT DO IT.

this was supposed to be a feature where you can paste, like, some code or some plain text into the chat, but **IRC4FUN DOES NOT LIKE THAT**. i tried using this feature on my test account and i got **IMMEDIETLY BANNED**. THEY **BANNED** ME. YOU WILL GET **IMMEDIETLY Z-LINED/BANNED** FROM THE IRC4FUN SERVERS IF YOU USE THIS FEATURE. DO NOT USE IT

uuhhhhhhhhhhhh....yeah i think that just about covers it. when you join the gc youll see that im already in it. ok bye!!!!!!!!!! see u in the gc!!!!!!!!!!
